Document Last Modified	2012-08-08		
Narrative	MISSED FIRST APPROACH. MADE ANOTHER OPPOSITE DIRECTION.DISTRACTED BY CHANGE, RAISED GEAR INSTEAD OF FLAPS ON ROLL.		

----- NTBS Accident 1 -----

Event Date	1998-07-17	Aircraft Make	Beech
Aircraft Model	58	Aircraft Serial Number	
Damage	NONE		
Probably Cause			
Preliminary Narrative	<p>On July 17, 1998, about 1700 eastern daylight time, N53RD, a Beech 58, operated by Allair Air Services Corporation, experienced an overheated electrical component while descending over Toms River, New Jersey. The certificated airline transport pilot, the sole occupant, initiated an uneventful precautionary landing at the Miller Airpark in Toms River. No damage or injuries were reported. Visual meteorological conditions prevailed and no flight plan had been filed. The personal flight was conducted under 14 CFR 91. The flight originated from White Plains, New York, and was destined for Belmar, New Jersey. In a telephone interview with the incident pilot, he stated that he was airborne for about 20 minutes when he smelled "something burning." He stated that it smelled like the burning was from an electrical source. He was descending through 3,000 feet above mean sea level toward the destination airport in Belmar at the time he noticed the smell. He then elected to land at the Miller Airport, where he asked a mechanic to inspect the airplane. The Safety Board interviewed the mechanic who was asked by the pilot to inspect the airplane. According to the mechanic (record of interview attached), a Bob Fields door seal inflation pump system was installed in the airplane. The mechanic stated that he inspected the door seal pump and found that the pump's plastic housing was partially melted. He also noticed that the wiring that connected the two door seal pump resistors was also partially melted. He stated that the resistors were "riveted the instrument panel shelf" which extended into the nose area.</p>
